

SINTERLEGHIE

Your needs. Our quality.

WHO WE ARE

SINTERLEGHE is world leader in the **design**, **manufacture** and **sale** of **tip dressers**, **electrode tip changers** and **metal cutters** for resistance welding electrodes, **supplying** major car manufacturers.

SINTERLEGHE is specialized in the design and manufacturing of tip dressers, electrode tip changers and metal cutters for spot welding electrode tip dressing.

Established in 1989 by **Eugenio Tedeschi**, the company developed its know-how, which allowed it to grow and differentiate its offer by reaching **high qualitative standards**.

The tenacity and perseverance in accomplishing its goals allowed **SINTERLEGHE** to devise new **design solutions** that ultimately became **patents**. This is an added value to a company that made innovation and technology

evolution its strength. Today **SINTERLEGHE** is a key partner for large international groups involved in car manufacturing.

Since 1992 its products, made in the facility of Anzola d'Ossola (VB), have been known all over the world with the brand **Ravitex**[®], sold in 4 continents and 23 Countries.

With offices in Marburg, Germany, and Sao Paulo, Brazil, and its **partnership** networks (including an agreement with Shanghai Faith Co., Ltd. for the Chinese market), **SINTERLEGHE** controls and supplies the European, Asian, US and South American markets.

4 CONTINENTS AND 23 COUNTRIES

OUR QUALITY

SINTERLEGHE has developed business and organisational strategies targeted at improving the *quality, competitiveness* and *productivity of the company* by leveraging processes and the relentless growth of key skills.

SINTERLEGHE operates in view of product and process improvement according to the standard ISO EN 9001-2008. In 1998 the company introduced a quality management system for its internal processes in compliance with the certified and internationally recognised model.

Quality and development goals are pursued not only through the steady review of products and production processes, but also through the professional development of company resources. In 2016 SINTERLEGHE started a training programme with FESTO Consulting, a major international consultancy firm,

for the development of individual skills prescribed at different organisational levels.

The application of working methods and standards targeted at Total Quality Management, together with the adoption of a new management model based on processes, are targeted at obtaining better performance in terms of productivity, flexibility, responsiveness and reliability.

The higher empowerment and the active involvement of staff in company decisions through targeted actions and plans are a strategic element to accomplish growth and development targets.

WHY SINTERLEGHE

SINTERLEGHE puts its **expertise**, **ability** and **professionalism** at the service of its clients. The goal is meeting the most advanced needs in the tip dressing and electrode tip exchange segments by developing a **business process of re-engineering** and **redesign** going through **technology innovation** and steady product and process development.

Technology innovation

SINTERLEGHE's design ideas have turned into patents, as an important guarantee for consumers, certifying the **originality** and **quality** of Ravitex® know-how.

Expertise and know-how

The collaboration with major automotive players worldwide allowed SINTERLEGHE to develop a strong **know-how** and an **in-depth knowledge** of the target market.

Superior quality

Ravitex® products meet the needs of the most advanced production lines, accomplishing ambitious goals in terms of process cost reduction, production capacity increase, quality and environmental friendliness.

Customer care

Ravitex® products result from a careful analysis of clients' needs and requirements. The care for clients prior and after the purchase and their satisfaction are absolute priorities.

RAVITEX® PRODUCTS

The characteristics of Ravitex® products are targeted at the needs of our worldwide clients. Their performance result from intellectual innovation and process quality.

All machining operations are performed in the Anzola d'Ossola (VB) plant with high-output CNC machines. The processes are managed and controlled by a single management software. An air-conditioned metrology room ensures the full dimensional control over the entire manufactured range.

SINTERLEGHE's manufacturing capacity has grown to become more and more flexible over the years thanks to Lean Production and TPS organisational and production methods.

This approach led to optimising internal and outsourcing processes, thereby reducing lead times.

SIGMA POWER SPECIFICATION

The table below shows the details of electrical and pneumatic connections available.

SPECIFICATIONS	EEC SOUTH AMERICA AFRICA - INDIA	CHINA	USA
POWER	0,8 kW	0,8 kW	0,8 kW
FREQUENCY	50/60	50	50/60
SUPPLY	Y 380- 420 V 50 Hz 2A	400 VAC 50 Hz 2A	Y 380- 420 V 60 Hz 2A
SUPPLY	Y 380- 480 V 60 Hz 2A		Y 380- 480 V 60 Hz 2A

Dresser SIGMA Electric for Robot Welding Guns

Description

- 01 Machines
- 01 Tip dresser
- 01 SIGMA series electric motor
- XXXXX Sequential edited by the SINTERLEGHE Technical office for client's technical specifications

MECHANICAL INTERFACE

	<ul style="list-style-type: none"> • (LxW) 300 x 300 mm
Base Plate	<ul style="list-style-type: none"> • (Ground fixing holes) 4 x Ø 26 mm holes • (Distance between holes) 230 x 230 mm
Tip dresser's head	• 2 x M10 screws distance between holes 60 mm
Head orientation	• Dressing head adjustable in 2 positions

TIP DRESSER'S FEATURES

Distance cutter center - carter edge	39 mm
Tip-dresser's head height	20 mm
Cutter rotation speed loadless	210 rpm
Cutter rotating direction	Clockwise
Tip-dresser's head equalization height	+/- 30 mm

Electric and pneumatic connection: check availability on pag. 7

Better performance with a powerful pneumatic suction device.

Carter is fixed only on upside to allow the fast disassembly for easy maintenance.

Most reliability due to new gears design and to new hardness and surfaces treatments to avoid corrosion.

High cutting torque: power motor up to 0,8kW.

Equalization system:
- Up to ± 30 mm range.
- Very smooth movements.

TIP DRESSER VERSION H

TIP DRESSER VERSION V1

TIP DRESSER VERSION V2

It's possible to configure SIGMA electric dresser in H - V1 - V2 position without any additional optionals.

SIGMA Changer & Dresser

Patent 1427232

Description

- 01 Machines
- 06 Tip dresser + electrode changer
- 01 SIGMA series electric motor
- xxxxx Sequential edited by the SINTERLEGHE Technical office for client's technical specifications

MECHANICAL INTERFACE

	<ul style="list-style-type: none"> • (LxW) 300 x 300 mm
Base Plate	<ul style="list-style-type: none"> • (Ground fixing holes) 4 x Ø 26 mm holes • (Distance between holes) 230 x 230 mm
Tip dresser's head	• 2 x M10 screws distance between holes 60 mm
Head orientation	• Dressing head adjustable in 2 positions

TIP DRESSER'S FEATURES

Distance cutter center - carter edge	39 mm
Tip-dresser's head height	20 mm
Cutter rotation speed loadless	210 rpm
Cutter rotating direction	Clockwise
Tip-dresser's head equalization height	+/- 30 mm
Bidirectional releasing system Patent 1427232	

Electric and pneumatic connection: check availability on pag. 7

Electrodes Magazine Patent 1420033

Total pneumatic movements controlled by robot. Self cleaning feature for each loading by air jet.

Up to 14+14 electrodes $\varnothing 16$ or 10+10 electrodes $\varnothing 20$ stored and protected until the loading.

2 sensors to alert the reloading of the magazine.

Possible to load different types of electrodes upside and lowerside.

Integrated fixing plate (optional).

Bidirectionale Releasing System Patent 1427232

- Possibility to release electrode from $\varnothing 13$ to $\varnothing 20$ mm also fixed on screwed holder.
- It's possible to release different type of electrode upper /down side if with the same diameter.
- The release of the electrode is made of 380 millisecond.
- The release upper and down electrode in the same position.
- The force required to release the electrode is auto adaptive from 30 daN at 180 daN at evry cycle.
- To each release operation it takes account of the diameter and the oxidation of electrode.

2 sensors to detect the effective presence of the electrodes in the loading bay before and after the loading on the welding gun.

1 sensor to detect the presence of electrodes on the welding gun before and after the loading of the new electrode.

SIGMA CHANGER & DRESSER POSITION H

SIGMA CHANGER & DRESSER POSITION V3

It's possible to configure SIGMA Changer & Dresser in H -V3 position without any additional optionals.

Sigma Swivelling Unit

Description

- Options
- 01 Machines
 - 03 Swivelling Unit
 - 05 Electric Motor without dressing head
 - 01 SIGMA Series electric motor
 - XXXXX Sequential edited by the SINTERLEGHE Technical office for client's technical specifications

MECHANICAL INTERFACE

- | | |
|--------------------|---|
| Base Plate | <ul style="list-style-type: none"> • (LxW) 730 X 180 mm • (Ground fixing holes) 6 x Ø 20 mm holes |
| Tip dresser's head | <ul style="list-style-type: none"> • 2 x M10 screws distance between holes 60 mm |

TIP DRESSER'S FEATURES

Distance cutter center - carter edge	39 mm
Tip-dresser's head height	20 mm
Cutter rotation speed loadless	210 rpm
Cutter rotating direction	Clockwise
Tip-dresser's head equalization height	+/- 30 mm

Electric and pneumatic connection: check availability on pag. 7

Suction device totally integrated on head.

Head position settings
5 axes fixed 1 axis pneumatic.

Solenoid valves
on head.

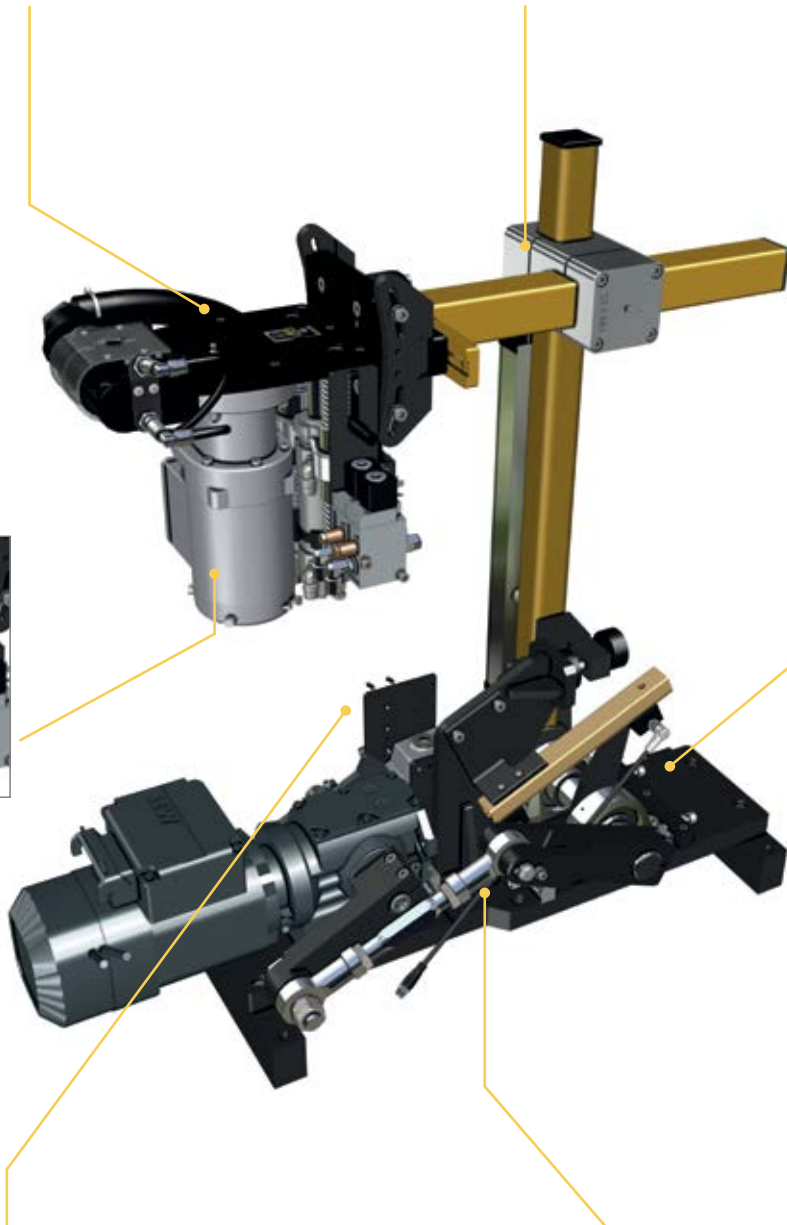

Mechanical stop
on dressing position.

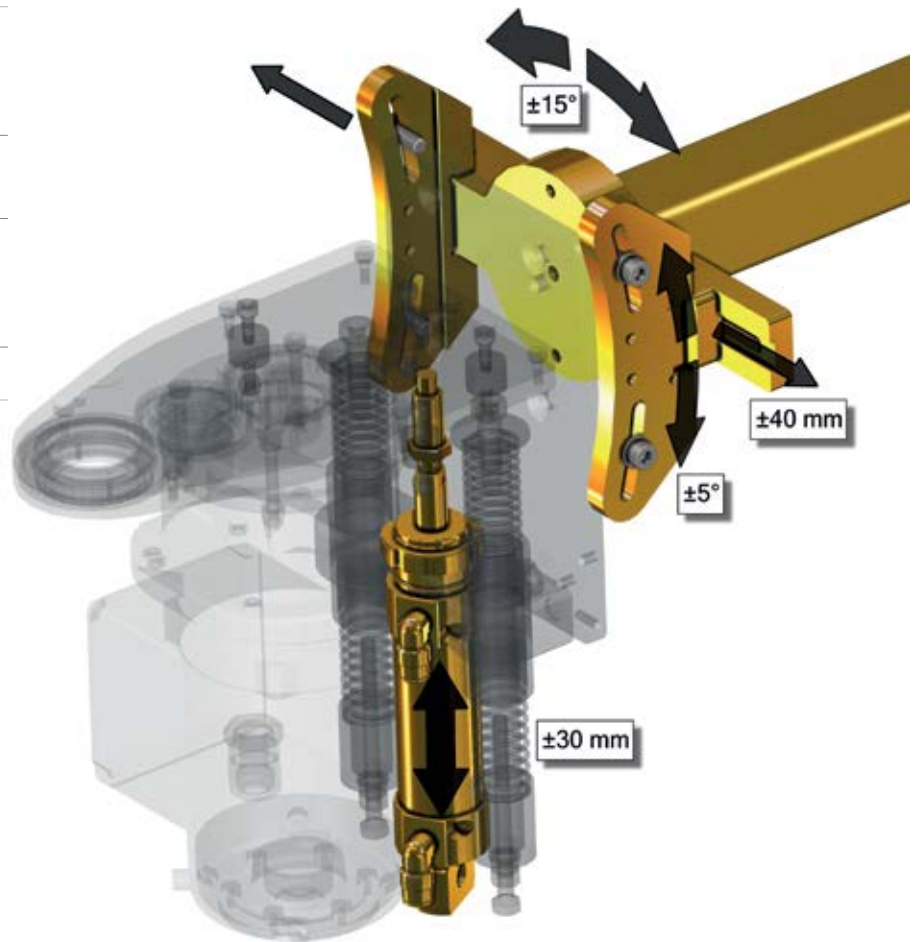

Fixed connection
plate.

Transmission
redesigned.

- Collision with the welding gripper impossible thanks to pneumatic head control
- Manual adjustment of the dressing head on 3 axes
- Adjustment of the dressing head positioning arm on 6 axes
- Manual head settings

SIGMA SWIVELLING UNIT SETTING 1

SIGMA SWIVELLING UNIT SETTING 3 INCLUDING ADDITIONAL ARM

12 different assembly possibility setting head tip dresser: 5 manuals, 1 pneumatic.

SIGMA Pneumatic Changer Patent 1427232 for Fixed Welding Guns

Description

- 01 Machines
- 02 Pneumatic electrode changer for fixed welding guns
- 02 SIGMA Pneumatic motor
- xxxxx Sequential edited by the SINTERLEGHE Technical office for client's technical specifications

MECHANICAL INTERFACE

	<ul style="list-style-type: none"> • (LxW) 102 x 75 mm
Base Plate	<ul style="list-style-type: none"> • (fixing holes) 4 x Ø 9 mm holes • (Distance between holes) 40 x 40 mm
Head orientation	Head adjustable. The height, horizontal angle of the head can be set according to customer's need.

SIGMA PNEUMATIC CHANGER' FEATURES

Tip-dresser's head height	20 mm
Cutter rotation speed loadless	210 rpm

- +** **PLUS**
- Bidirectional releasing system patent 1427232
 - Electrodes magazine patent 1420033 containing up to 28 Ø 16mm electrodes or up to 20 Ø 20 mm electrodes
 - Compact overall dimensions

SIGMA Manual Dresser

Description

- 01 Machines
- 05 Manual tip dresser
- 01 Pneumatic operation
- XXXXX Sequential edited by the SINTERLEGHE Technical office for client's technical specifications

TIP DRESSER'S FEATURES

Distance cutter center - carter edge	39 mm
Tip-dresser's head height	20 mm
Cutter rotating direction	Clockwise

- + **PLUS**
- Possibility to mount three blades or single blade cutter
- AIR SUPPLY: 6 BAR ISO 8573 Class 3.4.3
- AIR PIPE SUPPLY:
- Ø 10 external
- Ø 8 internal minimum

OMICRON Optical Sensor
Patent EP2938454

Intelligent sensor for detecting the geometry of the electrode and brightness of the welding lens.

FUNCTIONS

Optical detection and analysis of the level of contamination of the welding lens	<i>Accuracy of 5% in measurement of the contaminated area</i>
Optical detection and analysis of the electrode geometry in order to measure height and estimated deformation of the welding lens	<i>Accuracy of 0.1 mm on dimensional measurements</i>
Integrated logic to establish level of polishing and dressing required to restore maximum welding efficiency	<i>Cost reduction on electrode replacements</i>
Integrated adaptive logic to optimise the maximum number of welding spots performable before further monitoring operation	<i>Optimal trade-off between efficiency of use of the robot, energy consumption and welding quality</i>
Integration of HW/SW with welding cell in accordance with the paradigms of 4.0 industry	
Logging data with functions of simplified extraction of files for offline analysis	
Configuration software based on web technology	

The **OMICRON** Optical Sensor Patent **EP2938454** will be available from February 2018.
